

## StorageGuard®

Data Storage &  
Infrastructure Security  
Management Solution

Proactive – Security Management

CERT, STIG's NIST Compliant

## Key Solution Benefits

## PRO-ACTIVELY:

- ◆ Continuous scanning and analysis of data storage systems.
- ◆ Automatic detection of security risks.
- ◆ Knowledge base of security configuration best practices.
- ◆ Overall health and compliance report.

**StorageGuard®** scans data storage, storage management, and backup systems for vulnerabilities and misconfigurations. For the first time, enterprises will have complete visibility of their storage blind spots, with the most urgent risks automatically prioritized.

**"We've Got This Covered" ...****No, You Don't...**

Perimeter-based defense is not enough to protect against threats. The storage system is where all data is kept. Your existing vulnerability scanning solutions cover everything today, except for your storage, backup and storage management systems.

Proactive Data Storage Security &  
Protection Management

**Storage is your most important asset when it comes to protection from Ransomware. However, storage is also the only layer of IT not covered by traditional vulnerability management tools.**

**Until Now...****Head of Information Security**

- How do I assess the security of data storage?
- How do I discover and minimize the storage attack surface?
- How do I manage and prioritize storage security risks?
- How do I assess data recoverability in the event of a cyberattack?

**Head of Infrastructure & Storage**

- How do I identify and resolve storage security issues?
- How do I prove adherence to our security configuration standards / baseline?
- How do I keep track of storage configuration changes?
- How do I automate validation & enforcement of storage security best practices?

**How is Securing Storage Different than Securing Servers?**

- Different network model (SAN vs TCP)
- Different access control features (zoning, masking)
- Scanning agents cannot be installed on the majority of storage systems (closed systems / appliances)
- Some of the systems run non-standard operating systems
